Benefits of use:
- Excellent combination of P and K in liquid form
- Good fertilizer for use as a “grow in” material
- Blends easily with Nitrogen containing fertilizers
- Excellent product for fertigation

0-20-20 provides an excellent source of phosphorus and potassium for either cool season grasses at overseeding time or warm season grasses at transition.

Phosphorus is utilized in the formation of nucleic acids, the storage and transfer of energy, while also increasing seedling vigor and root development. Potassium affects turf’s protein and carbohydrate metabolism efficiencies, provides increased disease resistance, while maintaining proper water relations within the plant.

0-20-20 lends itself well to blending and may be combined with many different micronutrients to coincide with the nutritional demands of the turf and the cultural practices of the turfgrass professional. Prior to mixing a jar test is recommended to test for compatibility, do not mix with fertilizers containing calcium.

Guaranteed Analysis:
- Total Nitrogen (N) 0%
- Available Phosphorus (P₂O₅) 20%
- Total Potassium (K₂O) 20%

Weight per gallon: 12.0 lbs.

Each gallon of 0-20-20 supplies 2.4 lbs. of P and 2.4 lbs. of K

Recommended applications rates:
- ¼ lb. P/1000 ft² 4.54 gallons/acre
- ½ lb. P/1000 ft² 9.01 gallons/acre
- 1.0 lb. P/1000 ft² 18.15 gallons/acre
- ¼ lb. K/1000 ft² 4.54 gallons/acre
- ½ lb. K/1000 ft² 9.01 gallons/acre
- 1.0 lb. K/1000 ft² 18.15 gallons/acre

Fertizona makes no claims beyond suggested amounts. These rates are only suggestions and should only be used as guidelines.
