

20-0-0 AN-20

Benefits of use:

- **Quick N uptake in cool weather**
- **Two split Nitrogen sources**
- **Easily blended with numerous micronutrients**
- **Excellent product for fertigation**

AN-20 is an excellent source of **nitrogen** best applied during the cooler growing months of the year. It is best suited for cool season turf i.e. ryegrass, poa trivialis, etc.

Nitrogen is the single greatest factor in turf growth. Absorbed primarily as nitrate or ammonium, **nitrogen** promotes rapid growth while improving turf's ability to withstand stress and heavy traffic. A deficiency of **nitrogen** causes slow growth, uniform yellowing of foliage (chlorosis), and poor root development, while affecting the assimilation of other nutrients within the plant. **Ammonium Nitrate** can be combined with other crop nutrients to coincide with the turf's nutritional needs. Suggested rates of application vary from 2 to 8 pounds of **N** per 1000 square feet per growing season.

Guaranteed Analysis:

| | |
|--------------------------------------|--------------|
| Total Nitrogen (N) | 20.0% |
| Ammonium Nitrogen (NH ₄) | 10.0% |
| Nitrate Nitrogen (NO ₃) | 10.0% |

Weight per gallon:

9.48 lbs.

Each gallon of **AN-20** supplies 1.90 lbs. of **N**

Recommended application rates:

| | |
|--------------------------------|--------------------|
| ¼ lb. N/1000 ft ² | 5.75 gallons/acre |
| ½ lb. N/1000 ft ² | 11.50 gallons/acre |
| 1.0 lb. N/1000 ft ² | 23.00 gallons/acre |

Fertizona makes no claims beyond suggested amounts. These rates are only suggestions and should only be used as guidelines.
