Furst®-Class Concentrate from Fertizona is a patented combination of amino acids and proteins which activate several beneficial biological and environmental responses in plants. This proprietary nutritional technology is formulated into foliar and drip irrigation fertilizers as an ingredient to increase fertilizer efficiency, yield potential, plant health and quality of tree nuts. The following provides general guidance on formulation and use rate for walnuts, however programs can be customized as needed to best fit crop nutritional needs.

Furst-Class Concentrate stimulates and enhances overlapping physiological mechanisms. The product employs specific low-molecular weight carbon-containing metabolites both to stimulate metabolic activity within the plant cell and to elicit and maintain the plant's beneficial systemic acquired resistance (SAR) response. It is the qualitative biological actions, and the sequence of physiological events initiated by these signaling compounds present within Furst-Class Concentrate, that define the product's performance.

TWO APPLICATIONS

FIRST COPPER SPRAY

16 floz
 Furst-Class Concentrate/acre

SECOND COPPER SPRAY

16 floz
 Furst-Class Concentrate/acre

Furst-Class Concentrate was foliar applied with the grower's existing nutrient program 10 days apart.
