

Furst-Class Concentrate Drives Results

Furst-Class Concentrate from Fertizona is a patented combination of amino acids and proteins which activate several beneficial biological and environmental responses in plants. This proprietary nutritional technology is formulated into foliar and drip irrigation fertilizers as an ingredient to increase fertilizer efficiency, yield potential, plant health and quality of grain. The following provides general guidance on formulation and use rate for corn, however programs can be customized as needed to best fit crop nutritional needs.

Furst-Class Concentrate stimulates and enhances overlapping physiological mechanisms. The product employs specific low-molecular weight carbon-containing metabolites both to stimulate metabolic activity within the plant cell and to elicit and maintain the plant's beneficial systemic acquired resistance (SAR) response. It is the qualitative biological actions, and the sequence of physiological events initiated by these signaling compounds present within Furst-Class Concentrate, that define the product's performance.

ONE APPLICATION

PRIOR TO
FIRST IRRIGATION

16 floz
Furst-Class Concentrate/Acre

Furst-Class Concentrate was dribbled in the furrow with 28 gallons UAN 32 as a part of the grower's existing nutrient program.
