

# 32-0-0 UAN-32

## Benefits of use:

- Three split Nitrogen sources
- Highest Nitrogen content of all liquid fertilizers
- Easily blended with numerous micronutrients
- Excellent product for fertigation

UAN-32 (UN-32) is an excellent source of **nitrogen** best applied during the warm growing months of the year. It is used to provide a sustained source of **nitrogen** within the root zone.

**Nitrogen** is the greatest factor in turf growth. Absorbed primarily as nitrate and ammonium, **nitrogen** promotes rapid growth while improving turf's ability to withstand stress and heavy traffic. A deficiency of **nitrogen** causes slow growth, uniform yellowing of foliage (chlorosis), and poor root development, while affecting the assimilation of other nutrients within the plant, i.e. **potassium**. UN-32 can be combined with a myriad of micronutrients to coincide with the turf's nutritional needs. Suggested rates of application vary from 2 to 8 pounds of **N** per 1000 square feet per growing season.

UN-32 can effectively be applied by spraying or through fertigation. It is best used to improve turf vigor and color.

## Guaranteed Analysis:

Total Nitrogen (N)	32.0%
Urea Nitrogen	16.8%
Ammoniacal Nitrogen (NH <sub>4</sub> )	7.2%
Nitrate Nitrogen (NO <sub>3</sub> )	7.2%

## Weight per gallon:

11.06 lbs.

Each gallon of 32-0-0 supplies 3.54 lbs. of **N**

## Recommended application rates:

¼ lb. N/1000 ft <sup>2</sup>	3.10 gallons/acre
½ lb. N/1000 ft <sup>2</sup>	6.20 gallons/acre
1.0 lb. N/1000 ft <sup>2</sup>	12.40 gallons/acre

Fertizona makes no claims beyond suggested amounts. These rates are only suggestions and should only be used as guidelines.
